A brand licensed by Sonova

The shape of the future. Ergonomic design.

Based on in-ear scan research and validated by users

Design approach:

-Organic shape in the ear

- Sleek futuristic design
- Sticking less out of the ears
- Decent/unobtrusive look
- Pocket-size charging case

Key features

Wearing comfort •

Validated earbud ergonomics
Pocket-sized charging case

Sound quality •

TrueResponsesignature sound
SBC, AAC and aptXcodec
Audio EQ and Soundcheck
Low Latency mode

Battery runtime •

Up to 28h playtime

Secure fit •

Validated secure fit

• Bluetooth connectivity

Improved app connectivity
Latest Qualcomm BT chip with BT 5.3
Auracast
Multipoint connect

• Ease of use

Qi wireless charging
Smart pause
Customizable touch controls

• Active noise cancelation

Hybrid ANC
Adjustable Transparency
Improved wind noise suppression

What's in the box

TRUE SOUND EXPERIENCES

Sennheiser signature sound: Powered by Sennheiser extra wide-band TrueResponse transducer system, with 7mm dynamic audio drivers that deliver a high-end sound experience with impactful bass, refined with an improved treble response.

Lossless audio: Enjoy audio to its full potential without compromising the quality by a mathematically bit-for-bit exact wireless transmission

Optimized adaptive ANC: Next-generation hybrid-adaptive ANC seamlessly adapts to ensure that every beat and captivating nuance can be heard while outside noise gets blocked.

Adjustable transparency mode: When it is necessary to hear your surroundings or have a conversation, the low-noise Transparency mode brings the world back at a touch with improved occlusion reduction.

Sound personalization : the Sound Personalization feature intelligently calibrates a custom audio profile from a sophisticated analysis of user reactions against a series of benchmark sound samples. From there, advanced audio processing algorithms shape the listening experience around the elements of music the wearer finds most pleasing.

Adaptive 5-band EQ: the MOMENTUM True Wireless 4 sound can be shaped by a 5-band EQ. The new EQ adapts to the loudness of the audio content and ensures that the sound is optimally matched, no matter the listening volume.

PERFECTED FOR YOU

Sleek, timeless design: Available in three colors, it epitomizes the combination of immaculate style and fine craftsmanship that is the signature of the MOMENTUM range—upgraded material selection with metallic colors and a textile charging case.

Ultimate individual fit: Sennheiser's most compact ergonomic earbuds offer a perfectly secure and comfortable fit in the ear—even for sports. A choice of soft silicone earbud adapters and optional silicone fins to ensure a fit that's tailored to you.

Sweat & splash resistance: Trouble-free use while travelling, commuting or exercising, thanks to IP54-rated dust & splash resistance.

Robust BT reception: An optimized antenna design significantly increases the reception range and robustness against other interfering transmitters. While "dynamic role switching" seamlessly switches between the earbuds to the side with a more reliable connection to the phone.

30-hour playtime: Enjoy music for up to 30 hours with on-the-go charging via the case and 7.5 hours per earbud charge. New battery protection mode optimizes battery charging for extended battery lifespan. Wireless charging gives you total freedom from cables.

MRP: Rs. 29,990/-

SENNHEISER

2023 -Training Presentation -Sennheiser Brand & Products (Internal) -CONFIDENTIAL

INTRODUCING THE IE 200

**Your personal invitation
to a new world of sound.**

SENNHEISER

IE 200 key features Overview

- ▶ **Audiophile sound:** Carefully tuned to provide neutral, true-to-life voicing without peaks or troughs as well as deep, impactful bass, while 7mm TrueResponse transducers eliminate distortion almost completely.
- ▶ **Precision assembly:** Transducers are manufactured by using an advanced process to minimize unit-to-unit variation of the miniature dynamic drivers.
- ▶ **Unique dual-tuning feature:** By providing two mounting positions for the ear tips, users can self-tune the amount of low end and choose the bass response they prefer (see next slide).

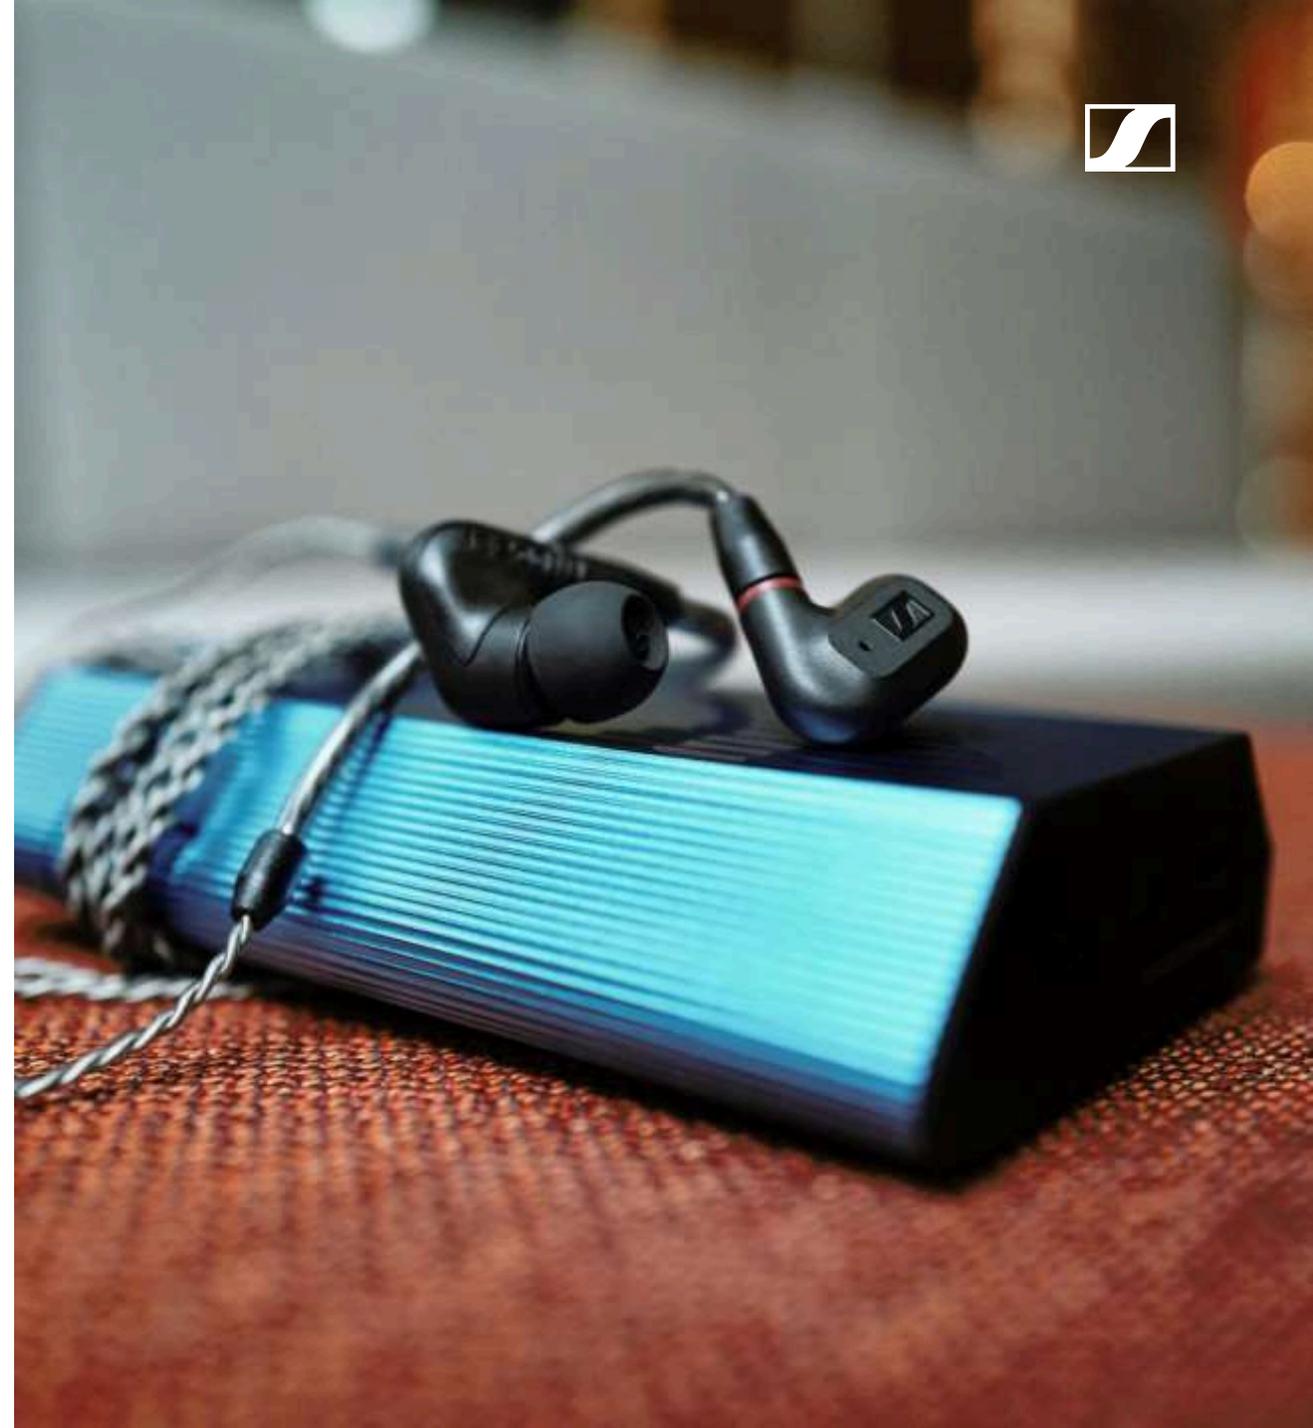

Exceptional durability

- ▶ **Compact dimensions:** The proven ergonomic design ensures a secure seal and long-lasting comfort for anyone, large or small.
- ▶ **Adjustable fit:** Adjustable ear hooks and a selection of ear adaptors in different sizes (S/M/L) made from silicone and memory foam.
- ▶ **Appealing design:** Classic, minimal all-black aesthetics.
- ▶ **Braided cable:** Optimized for low body noise—with gold-plated MMCX connectors and 3.5mm plug.

Purest sound reproduction

- ▶ **Patent-pending dual-tuning** feature for switching between powerful bass and open, analytical tuning
- ▶ **Acoustic fleece** smoothens treble for fatigue-free listening
- ▶ **Polymer blend diaphragm** for ultra-fast transient response and clarity
- ▶ **Irish-made 7mm TrueResonsetransducer** with extremely low distortion

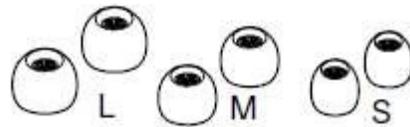

What's in the box

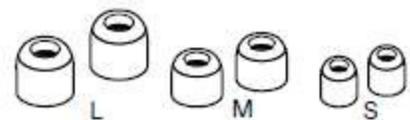

- ▶ IE 200 earphones
- ▶ Braided cable with MMCX connectors and 3.5mm plug
- ▶ Silicone and memory foam sets (S, M, L)
- ▶ Pouch
- ▶ Safety guide

Memory foam ear tips

INTRODUCING THE HD 620S

Time to switch.

SENNHEISER

For internal use

HD 620S. Key features.

- ▶ Speaker-like panoramic imaging –exceptional for a closed-back design
- ▶ Airy sound, natural tonality
- ▶ The 600-series DNA with ultra-low distortion across the entire frequency range
- ▶ Exceptional impulse response
- ▶ Intimately true vocal reproduction due to unobscured frequency bands
- ▶ Substantial yet balanced bass and sub-bass

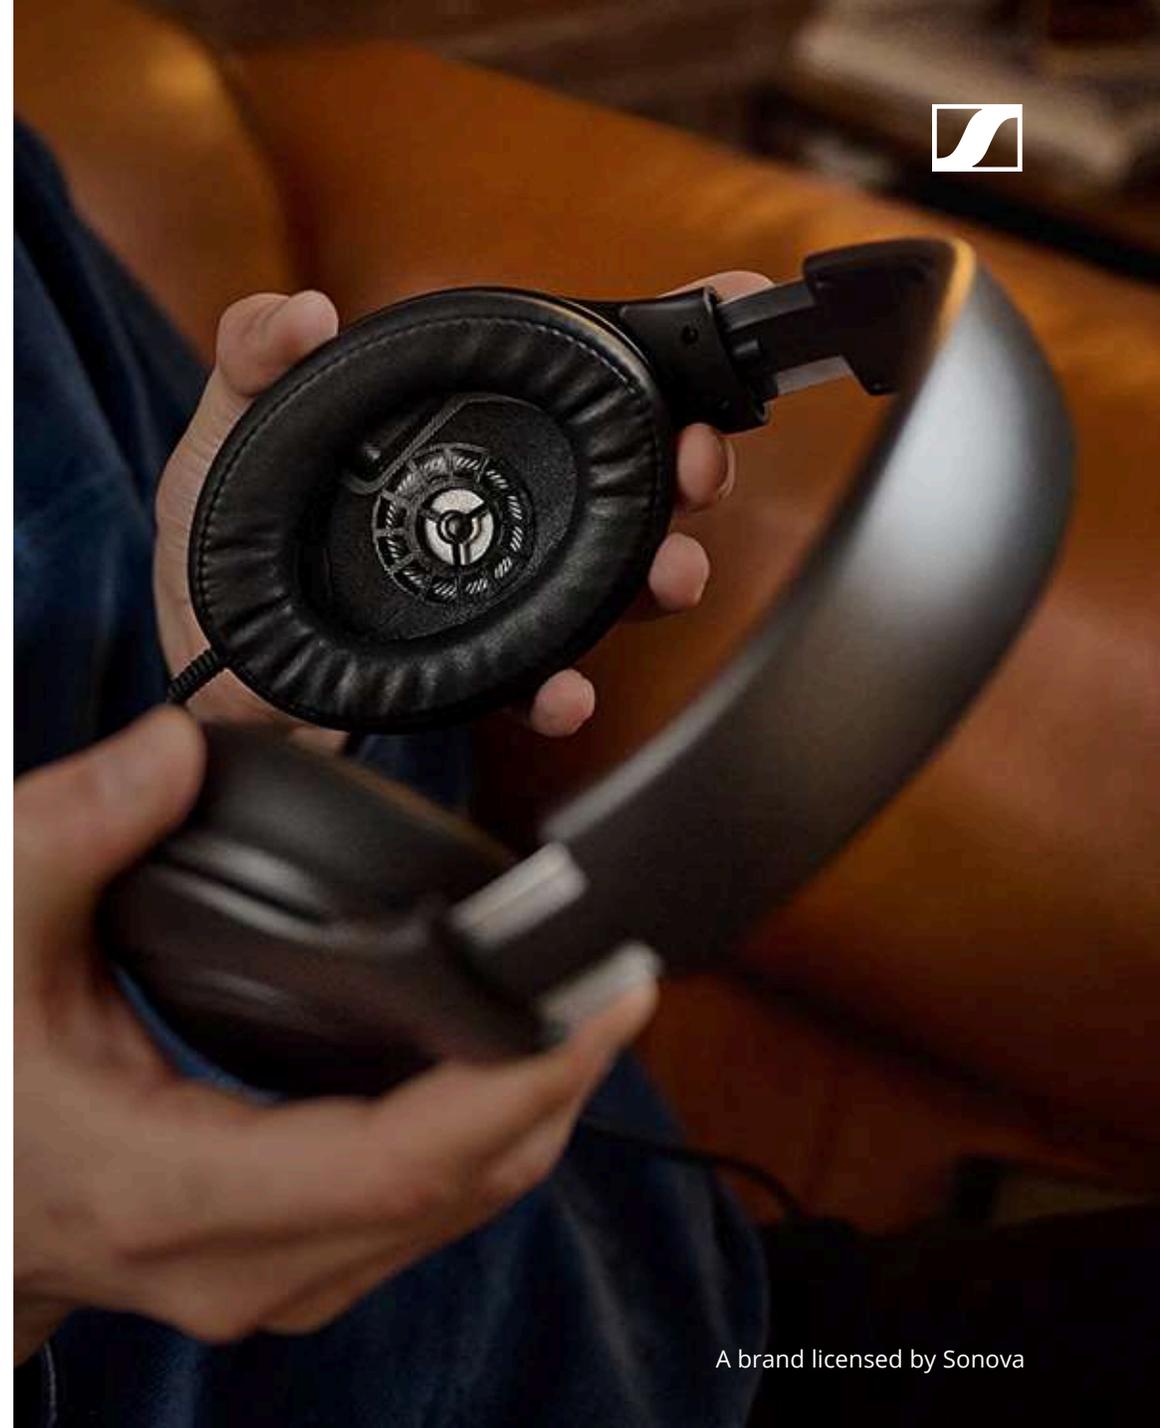

The natural Sennheiser sound you love

Sennheiser's HD 600 series has long been the standard for natural tone, thanks to our dedication to continuously improving the open-back concept. The HD 560S brought those qualities to a larger audience, with a soundstage that immerses listeners in their music.

The HD 620S combines the DNA of both headphone families, bringing the best of each to a closed chassis.

The reference-grade 42mm transducer made in Ireland provides ultra-low distortion across the entire frequency range. With an ultra-light aluminum 150-ohm voice coil, it ensures exceptional impulse response.

What's new –key technical highlights

▶ **Fine-tuned earpads** with ideal perforation and acoustic foam

Reduced reflections in the front volume. The sound can pass through perforations and be absorbed by the foam to imitate acoustic behavior of open-backs

▶ **Acoustically transparent dust cover**

Ensures the **purest transmission** of sound between **transducer and eardrum**

▶ **Soft surround adopted from HD 660S2**

Cleaner and richer sound in the **low-frequency range**

▶ **150 Ω impedance** inherited from the HD 660S

ensures consistent performance with many sources, including tube amplifiers

▶ **Ultra-light aluminum coil** half the weight for the same magnetic strength of copper

Foundation of the brilliant treble that our audiophile headphones are known for

▶ **No surround damping**

Optimized impulse response from a freely moving transducer: faster and more detailed sound perception

▶ **Absorbing acoustic foam** positioned in the backplate, behind the transducer

Absorb sound wave reflections that often compromise purity of sound in closed-back designs

▶ **Angled transducers** create a **cohesive soundstage**

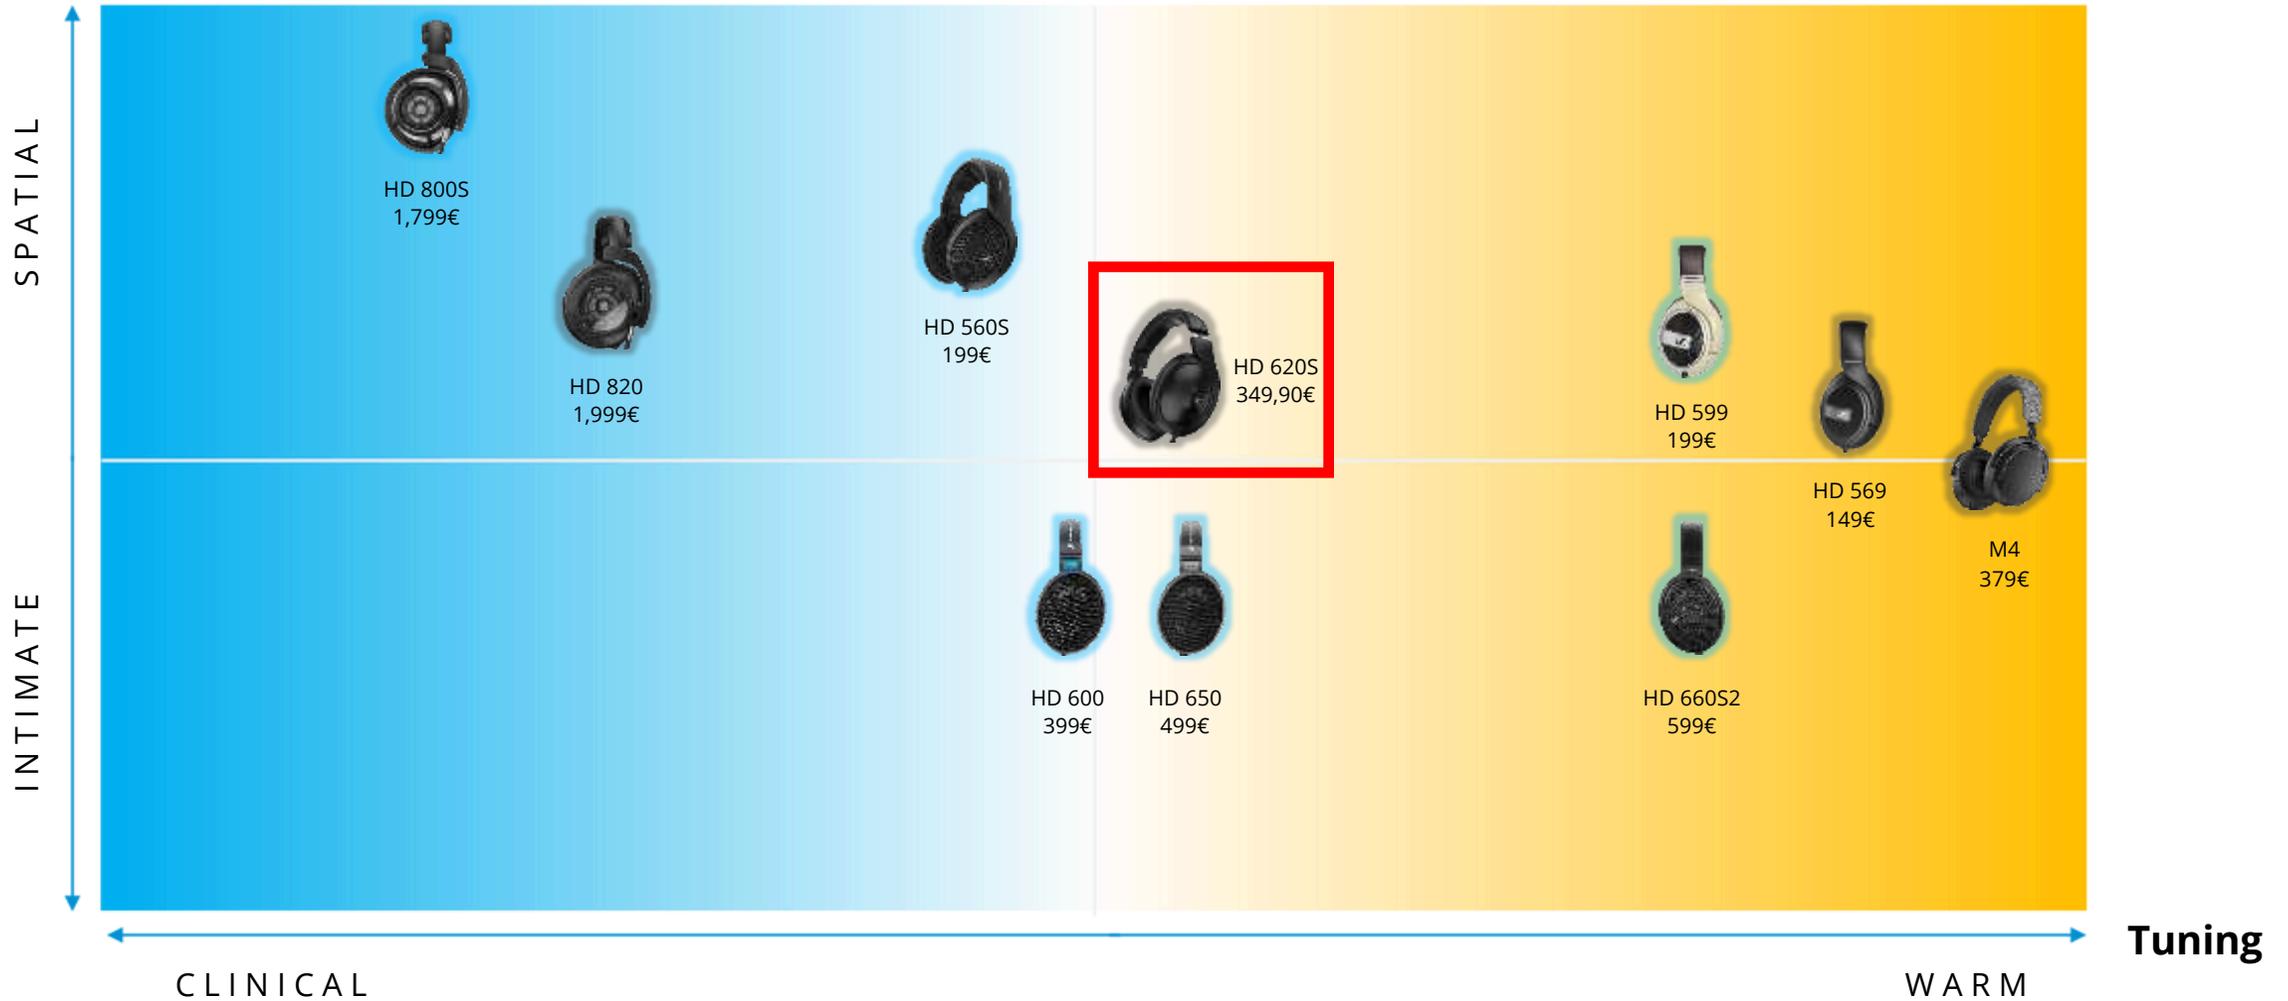

The stereo image is expanded to an almost **panoramic sound field**

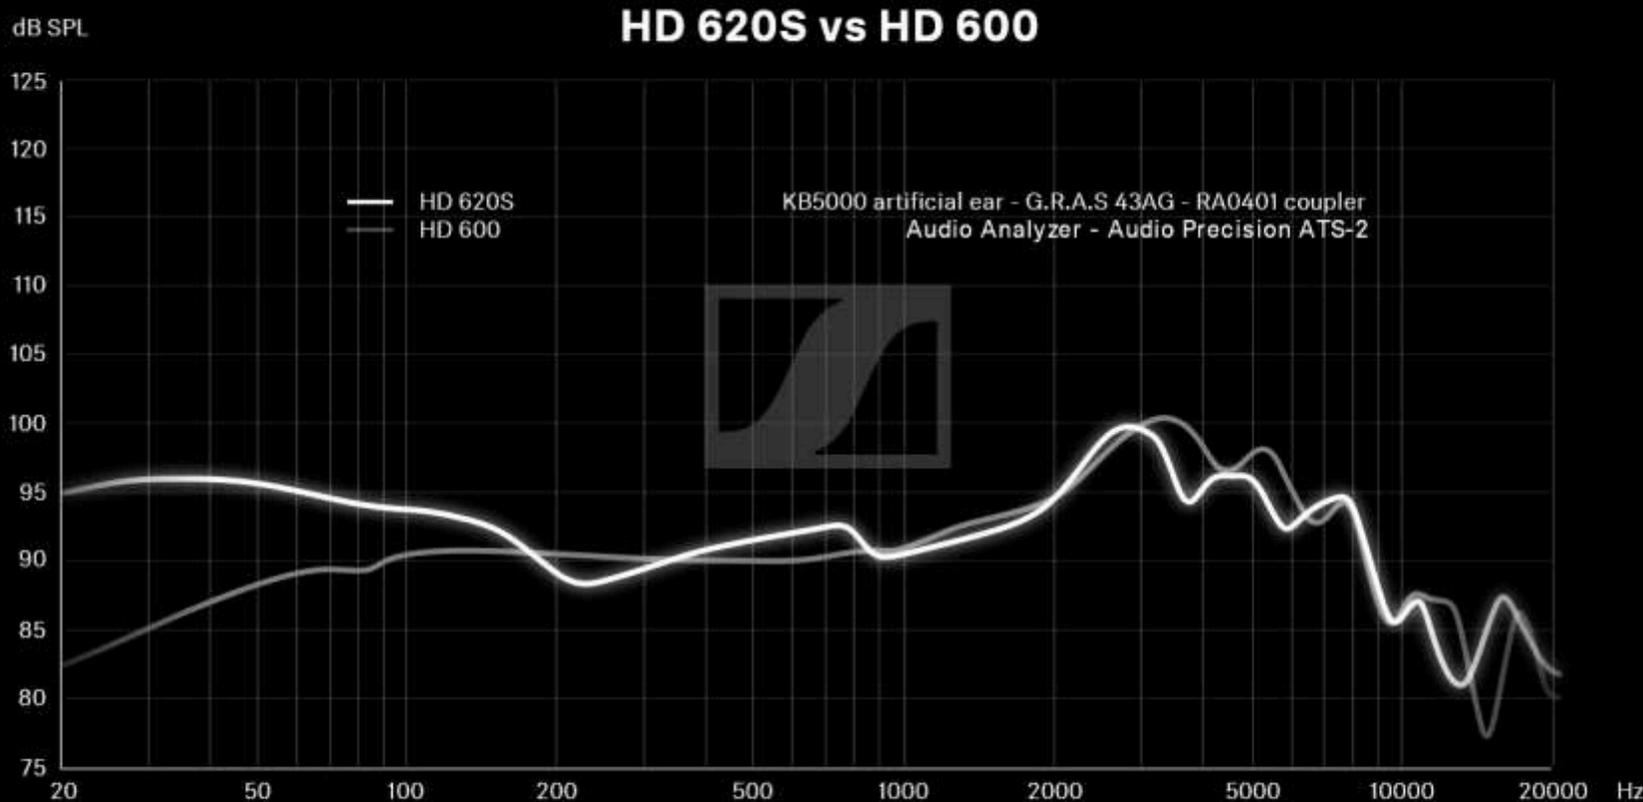

What sound to expect from HD 620S compared to our other headphones?

Soundstage

Frequency response measurement

Key takeaways:

1. Reference Sound

Overall, the frequency response (FR) of the HD 620S is fairly close to the reference HD 600, which suggests a very neutral true-to-life sound reproduction.

2. Accurate Bass

The most significant deviation is in the bass below 100 Hz. The weak point of the HD 600 is a relatively low bass response for modern consumer taste. The HD 620S has significantly enhanced performance in this area thanks to being a closed-back headphone.

3. Brilliant, smooth treble

The most impressive feature of the HD 620S as a closed headphone is the response above 4000 Hz: it's exceptionally smooth and well extended to the highest frequencies. Almost all competitors have either considerably less high treble (less detailed sound) or an uneven response (visual spikes, which translates to some instruments being unnaturally loud.)

What's in the box

- ▶ Closed-back headphones HD 620S
- ▶ 1.8 m cable with 3.5 mm plug
- ▶ 3.5 to 6.3 mm adapter

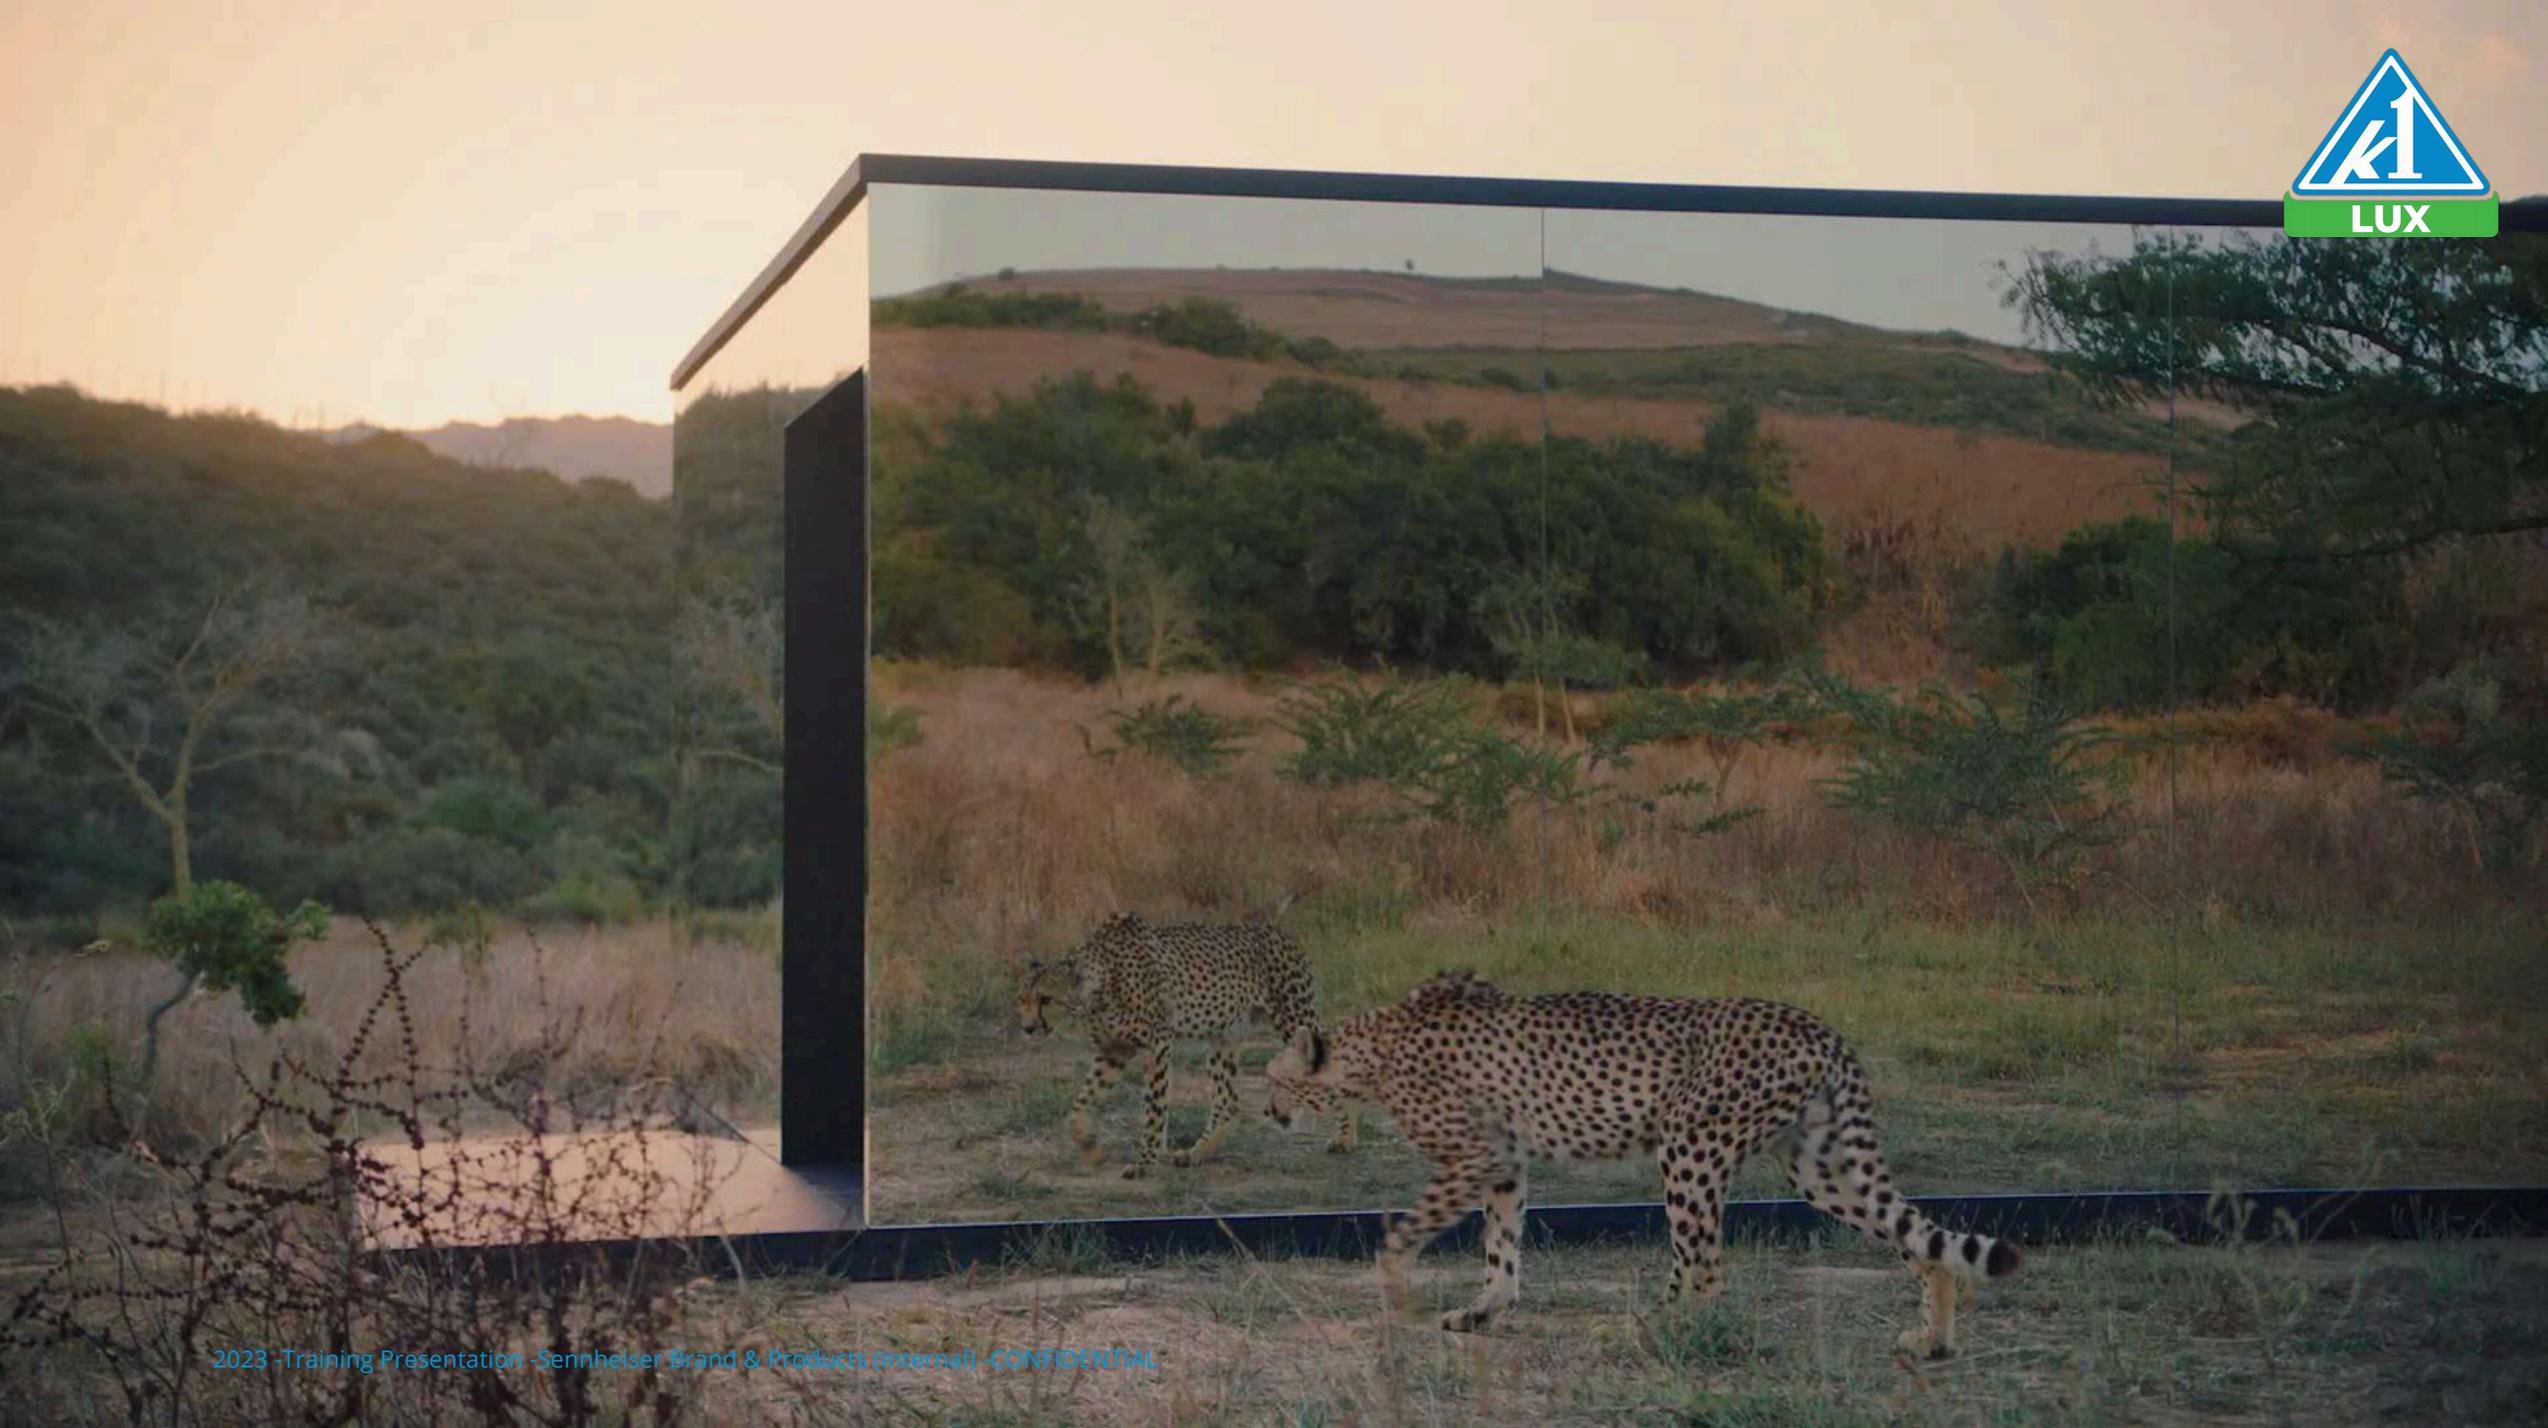

Same shipping approach as HD 560S:

▶ Master carton contains 10 units

▶ We ship master cartons, no pallet -we load the cartons in the truck for transportation

SOUNDBARS

AMBEO Soundbar | Max

AMBEO Sub

Product images

Pack shot

AMBEO Sub

MRP: INR 69,990

A breathtaking cinematic experience.

3D sound powered by virtualization

State-of-the-art AMBEO Virtualization Technology provides extremely deep bass for a natural and realistic sound to support the full home theatre experience.

Deep immersive bass

A closed enclosure, single high-end long-throw 8" woofer, and 350W class-D amplifier create precise thundering bass (~27 Hz) to support the 3D sound experience.

Automated self calibration

Built-in microphones capture your room's acoustic characteristics and reflective surfaces with extreme precision to create a 3D sound experience.

Digital processing

Allows the sub to compensate for negative room characteristics to create the optimal sound experience.

Multi-sub array technology*

Connect up to 4 subwoofers wirelessly for a clean aesthetic and calibrate them individually for optimal sound.

*Feature availability dependent on the AMBEO Soundbar product being utilized.
