## INTRODUCTION

# Be Open

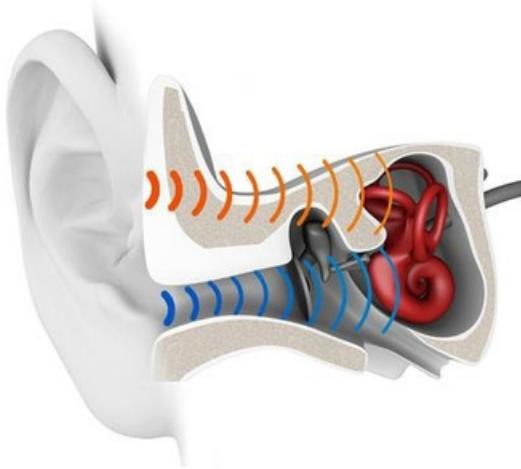

Shokz embodies the principle of being open in everything you do and everything you are, whether it be your surroundings, change, new ideas, or exciting adventures.

### THE SHOKZ WAY

Bone conduction is a natural part of the hearing process—sound travels through our eardrums and bones simultaneously. We've taken the concept to the next level through development of a suite of proprietary audio technologies and design patents. The result: headphones that deliver unrivaled situational awareness and comfort.

### HOW THEY WORK

Transducers guide mini vibrations through the cheekbones to the inner ears, delivering sound without plugging or covering.
